PROBLEM(GATE-26)

A fair dice is tossed two times. The probability that the second toss result in a value that is higher than the first toss is

$$(A)\frac{2}{36}$$
 $(B)\frac{2}{6}$ $(C)\frac{5}{12}$ $(D)\frac{1}{2}$

SOLUTION(GATE-26)

Given, a fair die, which is tossed twice. Let the random variable $X_i \in \{1, 2, 3, 4, 5, 6\}, i = 1, 2$, represent the outcome of the number on the die in the first, second toss. X_1, X_2 denote the result of the first, second toss respectively.

As the die is given to be fair, the probability mass function (PMF) is expressed as

$$p_{X_i}(n) = \Pr(X_i = n) = \begin{cases} \frac{1}{6}, & 1 \le n \le 6\\ 0, & otherwise \end{cases}$$
 (26.1)

The desired outcome $X_1 < X_2$, is of the form

$$X_1 \le n - 1, X_2 = n \tag{26.2}$$

The probability for this outcome is of the form

$$Pr(X_1 \le n - 1, X_2 = n)$$

= $Pr(X_2 = n) \times Pr(X_1 \le n - 1/X_2 = n)$ (26.3)

As X_1, X_2 are independent, (26.3) simplifies to

$$Pr(X_1 \le n - 1, X_2 = n)$$

= $Pr(X_2 = n) \times Pr(X_1 \le n - 1)$ (26.4)

(26.4) can be rewritten as

$$Pr(X_1 \le n - 1, X_2 = n)$$

= $p_{X_2}(n) \times F_{X_1}(n - 1)$ (26.5)

Using (26.1), the cumulative distribution function (CDF) is obtained to be

$$F_{X_i}(r) = \Pr(X_i \le n) = \begin{cases} \frac{n}{6}, & 1 \le n \le 6\\ 1, & n \ge 7\\ 0, & otherwise \end{cases}$$
 (26.6)

Hence the required probability is

$$\sum_{n=1}^{n=6} Pr(X_1 \le n - 1, X_2 = n)$$

$$= \sum_{n=1}^{n=6} p_{X_2}(n) \times F_{X_1}(n - 1) \quad (26.7)$$

From (26.1) and (26.6),

$$\sum_{n=1}^{n=6} Pr(X_1 \le n-1, X_2 = n) = \sum_{n=1}^{n=6} \frac{1}{6} \times \frac{n-1}{6}$$
 (26.8)

On solving (26.8), we get

$$\sum_{n=1}^{\infty} Pr(X_1 \le n - 1, X_2 = n) = \frac{5}{12}$$
 (26.9)

$$\therefore Pr(X_1 < X_2) = \frac{5}{12} (\text{option (C)})$$
 (26.10)

P.T.O

TABLE 1: Theoretical probabilities for different possible cases

Condition	$X_1 < X_2$	$X_1 > X_2$	$X_1 = X_2$
Probability	5	5	1
	12	12	12

Here is the plot describing the Theoretical vs Simulation results for the above mentioned cases
